Mac App Release Readiness Audit

A practical review of what stands between a working app and a customer-ready Mac release.

Client	_____
App	_____
Framework	_____
Audit date	_____
Planned distribution	_____

Audit purpose

This report identifies the most important release blockers, the evidence behind them, and the shortest responsible path to a customer-ready install. It is not a guarantee of App Review approval, Apple notarization, or commercial success.

Release snapshot

Release area	Status	Evidence or blocker
Build and core app behavior	Ready / At risk / Blocked	Notes from audit
App bundle and packaging	Ready / At risk / Blocked	Notes from audit
Signing and hardened runtime	Ready / At risk / Blocked	Notes from audit
Notarization readiness	Ready / At risk / Blocked	Notes from audit
Distribution and install path	Ready / At risk / Blocked	Notes from audit
First-launch smoke test	Ready / At risk / Blocked	Notes from audit

Audit verdict and release plan

Use this page to record the release decision and the most important next actions.

Verdict

Ready for a shipping sprint	The app builds and core functionality works. Remaining work is release engineering, packaging, testing, or launch materials.
Needs product work first	A build failure, early crash, or missing core product capability should be resolved before release work begins.
Not a fit	The request is outside a focused Mac release engagement, such as a redesign, ongoing team development, or regulated-data compliance.

Selected verdict: _____

Top release blockers

1. _____

Why it matters: _____
Recommended action: _____

2. _____

Why it matters: _____
Recommended action: _____

3. _____

Why it matters: _____
Recommended action: _____

Release plan

Convert the findings into a small number of owned, time-bound release actions.

Fastest viable release path

Step	Action	Owner	Target
1			
2			
3			
4			

Recommended engagement

If the app is a fit for the Mac App Shipping Sprint, outline the focused deliverables, assumptions, and timing below. Keep Apple Developer credentials, signing identities, certificates, private keys, and passwords under the client's control.

Recommended scope _____

Client responsibilities _____

Estimated timing _____

Proposed next step _____
