SAMPLE DELIVERABLE - RELEASE-READINESS AUDIT

One-page Mac App release plan

Example for a fictional SwiftUI utility. This shows the concise, evidence-led report a founder receives after the free readiness audit.

APP	FRAMEWORK	TARGET	VERDICT
FocusFlow	**SwiftUI / macOS 14+**	**Direct download**	**Ready for a shipping sprint**

Release snapshot

RELEASE AREA	STATUS	EVIDENCE / BLOCKER
Build and core behavior	READY	Release build succeeds; core capture and export flows pass on a clean test account.
App bundle and metadata	AT RISK	Bundle identifier and versioning exist. App icon still needs final 1024px source and export sizes.
Signing and hardened runtime	BLOCKED	No Developer ID signing configured yet. Hardened runtime entitlements must be confirmed before archive.
Notarization and distribution	BLOCKED	No notarized DMG or release workflow. Direct-download path is the recommended first launch route.
First-launch experience	AT RISK	Onboarding is clear; install instructions and a real outside-the-project-folder test are still needed.

Recommended release path

1	Configure Developer ID signing, hardened runtime, and release archive.
2	Create a notarized DMG and validate Gatekeeper behavior on a clean Mac account.
3	Ship a short install guide, privacy note, and repeatable release checklist.

Sprint recommendation

Recommended scope: a focused 3-5 day shipping sprint. The client retains their Apple Developer account, certificates, and signing identity. Success means a customer-ready, notarized direct-download release - not an App Store approval guarantee.

This is a sample report. A real audit is tailored to the project, with the exact evidence, blockers, and next actions needed to get to launch.
